

GSL DENTAL COLLEGE & HOSPITAL

(Promoted by G.S.L. Educational Society, Regd.No.546/1999)

Our institution offers comprehensive foundation courses designed to prepare students for their academic and professional journeys as they transition into college, clinical practice, or internships. These courses emphasize strengthening fundamental abilities and fosters holistic development. Orientation programmes for students reinforce foundational knowledge in key subjects like anatomy, physiology, and oral biology, ensuring students are well-prepared for advanced dental studies. Programs for health and wellness are combined to support mental and physical health, which helps students successfully handle the demands of clinical and academic settings. In addition, certain programs for all the students entering the clinics that includes modules on communication, professional ethics, biomedical waste management and infection control are conducted. Students are also introduced to the academic framework, institutional resources, and professional expectations through organized orientation events prior to their internship. Training in scientific writing, evidence-based practice, and research methodology introduces students to research and analytical abilities. In order to provide a supportive environment for students from a variety of backgrounds, cultural integration activities and mentorship programs promote inclusivity and teamwork. Students are prepared to complete these foundational courses and are thus guaranteed to be competent, self-assured, and prepared to succeed in both their academic and professional dental careers.
